Penn State Electro-Optics Center Organization Overview

The Electro Optic Center of Penn State University is a national center of excellence established in western Pennsylvania for the advancement of electro-optic science and technology. The Center's mission is to promote the development of electro-optic materials, components and systems needed to advance the state-of-the-art in electro-optic science and technology for defense applications.

The Electro Optic Center focuses its efforts in the areas of electro optic materials, design and process technology, sensor technology, reliability and failure analysis, laser technology, and fiber optics and optoelectronics. The center also supports education and outreach programs promoting science, engineering and technology at all education levels.
