

Solution

Anu: What do we currently do with our waste water from the CMP process?

Justin: We filter it to remove slurry particles. Then it goes through acid neutralization – 3 tanks progressively tune the pH towards neutral. Then goes into Cambridge waste water system. We don't even return it to grey water standards.

Anu: Could we do that? And if we did, could we use it for anything? Or maybe clean it further to make it into DI water?

Justin: Those are very good questions.
